-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 1, 3-6 and 8-17** are rejected under 35 U.S.C. 103(a) as being unpatentable over Waterval '230 in view of Chow '422.

Waterval discloses a socket comprising a main body including a first cylinder, and a second cylinder integrally formed on the first cylinder, wherein: the first cylinder of the main body has an outer periphery formed with a plurality of outer teeth, the second cylinder of the main body has an inner periphery formed with a plurality of inner teeth, the inner teeth of the second cylinder of the main body and the outer teeth of the first cylinder of the main body have the same tooth number and have the corresponding tooth shape; the first and second cylinders of the main body are formed with twelve outer teeth; the outer teeth of the first cylinder of the main body are arranged in an annular manner; the second cylinder of the main body is formed with twelve inner teeth; and the inner teeth of the second cylinder of the main body are in line with the outer teeth of the first cylinder of the main body. Waterval does not specifically disclose the teeth having arcuate shape. Chow discloses a socket wherein the teeth are arcuate in shape so as to provide more surface area contact with the mating part. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the teeth of Waterval's socket to have arcuate shapes as taught by Chow so as to provide more surface area contact with the mating part.

Response to Arguments

3. Applicant's arguments with respect to claim 1, 3-6 and 8-17 have been considered but are moot in view of the new ground(s) of rejection.
